

2,000 sq. ft. Branch Banking Facility

UPTOWN NATIONAL BANK

Branch Banking Facility
Chicago, Illinois

Functional Efficiency

An inviting, efficient floor plan was the key programmatic goal of this client. Taking this goal into consideration, functional as well as visual security sight-lines were designed to allow unobstructed views of the teller stations. A compact, yet efficient series of support spaces, including an enclosed 24 hour ATM, were also incorporated to provide a maximum amount of income producing space within a relatively confined area.

Pleasing Aesthetic

An indirect cove lighting system, combined with an accent chandelier over the customer entry and waiting area, provide a soft, yet visually comfortable level of task as well as general lighting. Cherry mill work and granite floor tiles were specified at high traffic areas. Personal banking office systems furniture and modular partition finishes were coordinated to compliment the natural cherry mill work.
